

FORANE[®] SOLVENTS

**Stay on course
in all weathers.**

*From
CFC 113 to
FORANE[®]
141b : for
a successful
transition.*

CFC 113 has already been banned in the European Union since 31st December 1994 and will be in other industrialised countries on 31st December 1995.

In accordance with recommendations from international bodies (UNEP) which have looked into the feasibility of CFC replacement, Elf Atochem has developed an intermediate product which is immediately available: FORANE[®] 141b.

This product is ideal for replacing CFC 113 in most Solvent applications without major investment. Thorough toxicological assessments have shown that FORANE[®] 141b can be used under the same industrial conditions as those applicable to CFC 113.

We are ready to offer the help of our Technical Support team and our Sales Network so that users can fully understand the potential benefits offered by the FORANE[®] 141b range (DGX, MGX, SV, SAZ, HG, D) and make the most appropriate choice depending on local regulations, material compatibility and working conditions.

For further information please contact the Fine & Speciality Chemicals Division Paul Branson by fax 1635 870036.
